

Intelligent 4G & 5G Routers

Jola offers a range of intelligent 4G & 5G routers which provide high speed connectivity for M2M and IoT applications. They are all IoT gateways, with built-in intelligence. Our models are competitively priced and available to order via Mobile Manager. Routers can be sent directly to site with a Jola SIM and will auto-configure when first powered on.

Mobile Manager Client

All models arrive with our Mobile Manager Client pre-loaded. It was developed to provide integration between our Mobile Manager portal and the Robustel routers. Mobile Manager Client auto-configures the APN and delivers real-time data to the Mobile Manager platform.

Features	Potential Benefits
Standard SMS Reboot	Available on all devices and enables remote reboot of the router and SIM via SMS.
Smart Roaming	Multi-Network SIMs connect randomly to one of the networks available to them. Enabling 'Smart Roaming' and defining the quality standards needed for the application(s) being served by the SIM results in the SIM connecting to a network that meets the standards specified. If this network then falls below one of those standards it will drop the connection and scan available networks for one that does.
Intelligent	Robustel routers come with the RobustOS SDK. This allows developers to create software that runs directly on the router, enabling the unit to act as a fully integrated IoT Edge Gateway, removing the need for a separate PC in many applications. This offers significant cost savings, energy savings and reduces complexity when rolling out large IoT solutions.
Global routers	A single SKU for global deployments. Routers with the appropriate certification that can work with a broad range of the radio frequencies that mobile operators use around the world.
Jola Healthcheck App	A proprietary app that Jola has developed which proactively reboots the device if offline based on parameters under the control of the use.
Warranty	A 2-year warranty is provided for peace of mind.
